

# STRATUS

Meeting the unique requirements of mission partners.

Stratus is a DoD private cloud built to meet unique mission partner requirements. Stratus provides a multi-tenant, self-service management capability for compute, storage, and network infrastructure. It delivers rapid elasticity, resource pooling, and broad network access through a self-service on-demand web-based portal where Mission Partners can manage their resources as needed.

Stratus provides customers with the following capabilities:

Risk Management Framework Authority to Operate accredited for Impact levels 2 through 6 (NIPRNet and SIPRNet)

Secure DOD authentication access to the environment

Web-based self-service estimates, ordering, funding and sustainment

Supports initial development through fully redundant high-availability environments

Disaster Recovery and Continuity of Operations Plan(s)

Object Storage and Dedicated Host

**Partners!**

## Hybrid cloud portfolio offering

Stratus complements other cloud options for customers, as part of a hybrid cloud solution. As an example, customers may choose to use Stratus as an on-prem cloud for certain applications that require higher bandwidth coupled with off-prem cloud for their data.

## Stratus customers are also able to add the following features:

Vulnerability Management Service (for IaaS customers), Cloud Plus (cloud infrastructure administration), Certified Cybersecurity Service Provider services, engineering services, and logging services.
